Hiring Manager Priority Commerce Re: Software Engineer

Dear Hiring Manager,

I am writing to apply for the Software Engineer role at Priority Commerce. Your focus on secure, maintainable fintech systems—and on responsible AI-assisted engineering—aligns closely with how I build software: ship reliable features, strengthen operational health, and own the quality of what I deliver.

I bring well over three to five years of professional development experience across C#, JavaScript, .NET server-side applications, and Microsoft SQL Server. At MedBen, I engineered a Flexible Spending Account system to replace a legacy platform, collaborated on inbound/outbound eligibility processing, and enhanced a client-facing web portal for analytics and reporting. At Heating And Cooling Products, I modernized applications across business units, improved SQL Server-backed workflows and reporting, and supported production systems. At Tsunami Software, I helped convert a VB6 order entry application to ASP.NET MVC4. Across these roles I have worked in agile, cross-functional settings; diagnosed and fixed production issues within my ownership; and balanced feature delivery with maintainability, testing discipline, and incremental performance improvements.

Most recently, I have been building a suite of tools for a hardware store that unifies product lookup, store inventory control, product grouping with tags, and physical retail barcode label creation in a single application. I developed that suite as a full-stack product with a React front end and a Python backend, using Cursor AI for pair programming, scaffolding, refactoring, test ideas, and documentation support—while applying sound design judgment and fully owning the code I ship. That project strengthens my modern web experience and demonstrates the responsible AI-assisted practices Priority expects.

Much of my career has been in regulated, transaction-oriented environments—especially healthcare financial and benefits processing—where accuracy, security awareness, and careful testing matter. I am motivated by platforms that accelerate cash flow and operational clarity, and I am eager to apply that mindset to Priority's Commerce Engine across payables, acquiring, and treasury solutions.

I would welcome the opportunity to contribute reliable, well-tested features, collaborate with product, architecture, UX, quality, and operations, and keep growing as an engineer on Priority's core systems. Thank you for your time and consideration.

Sincerely,

Daryl Roudebush 740.817.1655 daryldeanr@gmail.com
